| Annual Tribal Budget Consultations | Meeting/Workshop | In compliance with Executive Order 13175, the Secretary of HHS convened Annual Tribal Budget Consultation sessions in 8 of 10 HHS regions. Tribal Affairs, Office of Intergovernmental Affairs coordinated and executed the sessions. Accordingly, each Federal agency must have an accountable process to ensure meaningful and timely input by tribal officials in the development of regulatory policies that have tribal implications. While HHS and a number of its operating divisions have established a consultation process, the NIH has not established such a process. NICHD participated in the Denver session held in HHS Region 8. | ACF/AoA/AHRQ/ ATSDR/CDC/ CMS/FDA/HRSA/ IHS/OS/OSG/ SAMHSA | NONE | **NICHD** | Empowering Biomedical Research Community: Workforce Diversity. | Clinical and Translational Science Awards (CTSA) Networking Workgroup | Committee/Workgroup | Federal agencies support more than 600 research networks across the United States. Organized to meet the needs of different constituencies, with unique infrastructure, on limited budgets and often short timelines, they represent both a powerful resource and a significant opportunity for collaboration and health improvement. The goal of the "federation of research networks" workgroup is to explore options for increased linkages across the networks, with the goal of sharing lessons learned, improving processes and outcomes, and utilizing resources efficiently, with the ultimate goal of improving the health of the nation. These linkages may occur between federal agencies, within individual agencies, and at local CTSA sites. | AHRQ/CDC/HRSA | Health Care Quality/Patient Safety | **NCRR** | Empowering Biomedical Research Community: Global Health. | Clinical Decision Support (CDS) Federal Collaboratory and Inventory of Federal Clinical Decision Support Activities | Committee/Workgroup | A federal community of interest focused on clinical decision support, and a compilation of project summaries describing CDS activities that are either funded by the US Federal government, or that are being executed by agencies of the government. The term Clinical Decision Support (CDS) describes a variety of tools and technologies that are used within electronic clinical information systems to improve the quality, safety, efficiency and effectiveness of patient care. CDS provides clinicians, staff, patients, and other key decision makers with knowledge and person-specific information, intelligently filtered at appropriate times, to enhance health and health care. CDS encompasses computerized alerts and reminders, clinical guidelines, order sets, order entry feedback, patient data reports and dashboards, documentation templates, diagnostic support, and the presentation of contextually relevant reference information within clinical information systems. NLM has submitted to the Collaboratory and Inventory summaries of NLM projects involving Clinical Decision Support. | AHRQ/CDC/ HRSA/IHS/OS | Accelerate Discovery to Improve Patient Care: Disseminate health information to the public, Fast-track innovation planning and regulatory review, and Innovative Biomedical Technologies. | CC/**NLM** | Health Care Reform: Health Information Technology. | Unknown | 0 |

| Consensus Development Conference: Inhaled Nitric Oxide Therapy for Premature Infants | Meeting/Workshop | The final product of an NIH Consensus Conference is a written statement on a controversial medical topic prepared by an independent panel of health professionals free from conflicts of interest on the basis of the results of a systematic literature review, presentations by experts in the field, and public comments and questions. Inhaled nitric oxide therapy was approved by the U.S. Food and Drug Administration in 2000 to treat term and near-term infants with respiratory failure. Since its approval, researchers have examined expanding the use of inhaled nitric oxide therapy to treat premature babies born at less than 34 weeks gestation. Studies to evaluate its safety and efficacy for these infants have had mixed results in terms of key outcomes. The goal of this conference is to clarify the role of inhaled nitric oxide in this population. This meeting has not yet occurred. | AHRQ/CDC | Accelerate Discovery to Improve Patient Care: Disseminate health information to the public. Early Childhood Health Development. | Consensus Development Conference: Lactose Intolerance and Health | Meeting/Workshop | The final product of an NIH Consensus Conference is a written statement on a controversial medical topic prepared by an independent panel of health professionals free from conflicts of interest on the basis of the results of a systematic literature review, presentations by experts in the field, and public comments and questions. The goals of this conference were to examine the prevalence of lactose intolerance, the health outcomes of diets that exclude dairy products, the amount of dietary lactose tolerable in individuals with intolerance, and to identify effective strategies for managing lactose intolerance. The panel concluded that the true prevalence is not known. Many individuals who think they are lactose intolerant are not. Many individuals with real or perceived lactose intolerance avoid dairy and ingest inadequate amounts of calcium and vitamin D. In most cases, individuals do not need to eliminate dairy consumption completely. | AHRQ/CDC | Accelerate Discovery to Improve Patient Care: Disseminate health information to the public. Nutrition/Obesity. | NIA/NICHD/ NIDDK/**OD** | NONE | 2008 | 170,000 |
| Consensus Development Conference: Vaginal Birth After Cesarean: New Insights | Meeting/Workshop | The final product of an NIH Consensus Conference is a written statement on a controversial medical topic prepared by an independent panel of health professionals free from conflicts of interest on the basis of the results of a systematic literature review, presentations by experts in the field, and public comments and questions. A number of factors have contributed to a decline in the VBAC rate since the mid-1990s. The conference was convened to provide a thorough evaluation of the relevant research, to help pregnant women and providers make decisions about mode of delivery after a previous cesarean delivery. The panel concluded that trial of labor is a reasonable option for many pregnant women with one prior low transverse uterine incision. Trial of labor and elective repeat cesarean have important risks and benefits that differ for the woman and her fetus. A shared decision-making process should be adopted and, whenever possible, the woman's preference should be honored. | AHRQ/CDC | Accelerate Discovery to Improve Patient Care: Disseminate health information to the public. | NIH State-of-the-Science Conference: Diagnosis and Management of Ductal Carcinoma In Situ (DCIS) | Meeting/Workshop | NIH State-of-the-Science Conference provides a written statement on a controversial medical topic prepared by an independent panel of health professionals free from conflicts of interest on the basis of the results of a systematic literature review, presentations by experts in the field, and public comments and questions. With the increasing prevalence of DCIS of the breast and our current inability to determine those women with DCIS at high risk for invasive breast cancer, the purpose of the conference was to critically evaluate the available data on diagnosis and management. The panel concluded that much remains unknown in this area, but strong consideration should be given to remove the anxiety-producing term "carcinoma" from the description of DCIS. The primary question for future research should focus on the accurate identification of patient subsets diagnosed with DCIS who may be managed with less intervention. | AHRQ/CDC/FDA | Accelerate Discovery to Improve Patient Care: Disseminate health information to the public. Health Care Quality/Patient Safety. | NCI/**OD** | Health Care Reform: Comparative Effectiveness Research and Health Disparities. | 2007 | 0 |
| NIH State-of-the-Science Conference: Family History and Improving Health | Meeting/Workshop | NIH State-of-the-Science Conference provides a written statement on a controversial medical topic prepared by an independent panel of health professionals free from conflicts of interest on the basis of the results of a systematic literature review, presentations by experts in the field, and public comments and questions. Given the unprecedented proliferation of genomic information and the possibility of health care reform, this conference was convened to clarify the role of the family history, its validity in the primary care setting, and its effect on individual and population health outcomes. The panel recognized that family history has an important role in the practice of medicine and may motivate positive lifestyle changes, enhance individual empowerment, and influence clinical interventions. The panel found that it is currently unclear how this information can be effectively gathered and used in the primary care setting for common diseases. | AHRQ/CDC/ HRSA/OSG | Accelerate Discovery to Improve Patient Care: Disseminate health information to the public. Health Care Quality/Patient Safety. | NCI/NHLBI/ NHGRI/NIAAA/ NICHD/NIDA/ NIMH/NINR/**OD** | NONE | 2007 | 0 |
| NIH State-of-the-Science Conference: Preventing Alzheimer's Disease and Cognitive Decline | Meeting/Workshop | NIH State-of-the-Science Conference provides a written statement on a controversial medical topic prepared by an independent panel of health professionals free from conflicts of interest on the basis of the results of a systematic literature review, presentations by experts in the field, and public comments and questions. The goals of this conference were to examine the factors associated with an increased or decreased risk of Alzheimer's or cognitive decline and the risks and benefits of proposed interventions to improve or maintain cognitive function. The panel concluded that firm conclusions currently cannot be drawn about the association of any modifiable risk factor with cognitive decline or Alzheimer's. Evidence is insufficient to support the use of pharmaceutical agents or dietary supplements. A large amount of promising research is under way; these efforts should be increased. | AHRQ/CDC/CMS | Accelerate Discovery to Improve Patient Care: Disseminate health information to the public. | Ten years post PKU Consensus Conference: State of the Science | Committee/Workgroup | The purpose of this collaboration is to have a scientific discussion to address management of phenylketonuria (PKU) in light of recent research findings. Screening and management guidelines for PKU were last published as the result of a Consensus Conference held in October 2000, and there have been new developments since that time. This new discussion will consider the state of the science in the areas of diet control and management; pharmacologic interventions; PKU and pregnancy; long-term cognitive outcomes and follow-up; and molecular testing, new technologies, and epidemiologic considerations. We are convening working groups to generate and address specific questions related to these topics. In parallel, an AHRQ Evidence-based Practice Committee is independently evaluating the use of newly available pharmaceutical interventions relative to dietary interventions for PKU, with the NIH as a partner in this process. We plan to host a conference in late 2011 (or early 2012) after the AHRQ review process, to discuss the conclusions and recommendations of the working groups. | AHRQ/CDC/FDA/ HRSA | Accelerate Discovery to Improve Patient Care: Disseminate health information to the public, Innovative Biomedical Methodologies, Innovative Biomedical Technologies, Patient-centered Research, and Translate basic science into new therapies.
