| Adolescents in HIV Biomedical Prevention Clinical Trials | Meeting/Workshop | The purpose of this meeting was to examine and discuss the desirability and timing of as well as barriers to enrollment of adolescents in the HIV Biomedical Prevention Clinical Trials. Participants included representatives from academia, industry, HIV-affected communities, and various branches of the United States government and offered an expanse of expertise covering the medical, behavioral, ethical, legal and regulatory ramifications of including or not including adolescents in biomedical prevention trials. The deliberations from this consultation formed the foundation for the special July 2010 adolescent supplement in the Journal of Acquired Immune Deficiency Syndromes (JAIDS) entitled "Inclusion of Adolescents and Young Adults in Biomedical HIV Prevention Research." | FDA | Accelerate Discovery to Improve Patient Care: Disseminate health information to the public, Fast-track innovation planning and regulatory review, and Innovative Biomedical Methodologies. | Affordable and Accessible Hearing Health Care for Adults with Mild to Moderate Hearing Loss August 25-27, 2009 | Meeting/Workshop | According to Healthy People 2010, only 16 to 17 percent of adults between the ages of 20 and 69 with hearing impairment have used hearing aids, and only 25 to 29 percent of adults ages 70 and over with hearing impairment have used them. Hearing health researchers cite multiple reasons for the gulf that exists between those who need and those who have hearing aids, with cost as an important factor. Since a hearing aid's lifespan is only 4-5 years, a hearing aid wearer could spend tens of thousands of dollars on aids over his or her lifetime. In August 2009, this issue was explored during a working group sponsored by the NIDCD. The goal of the meeting was to develop a research agenda that could help increase the accessibility and affordability of hearing health care for adults with mild to moderate hearing loss. | FDA/HRSA | Accelerate Discovery to Improve Patient Care: Specific category priorities not reported. | Avian Influenza Collaborative Project | Research Initiative | This multinational research is aimed at modeling the transmission dynamics of Avian Influenza (AI) spill-over from birds to humans using field data from different regions (Asia, Africa, Latin America). The expected project output is an ecological model for AI spill-over which will help us predict these events as well as inform and focus our global Avian and Pandemic Influenza prevention and response activities. This is one of the few multi-national ecological studies to develop an understanding of the critical elements of spillover and transmission of influenza which integrates diverse fields of expertise (ecologists, geospatial technology experts, modelers, virologists, and epidemiologists) and will produce a predictive model. By providing supplements to Fogarty grantees, this activity leverages FIC's multi-disciplinary network of current grantees, and it promotes sample and data sharing. | CDC/OS | Global Health: Infectious Diseases. | **FIC** | Empowering Biomedical Research Community: Global Health. | 2009 | 1,764,204 | 1,714,006 |

| Behavioral and Social Sciences in HIV Vaccine Clinical Research | Meeting/Workshop | The purpose of this workshop was to identify how HIV vaccine and Behavioral and Social Science (BSS) researchers, along with relevant communities, could undertake a more collaborative and integrative approach to the area of HIV vaccine clinical research. The workshop sought to identify challenges and opportunities as well as break new ground operationally to advance such an approach. During the 1.5 day workshop, presentations on key BSS topics, methodology, and experiences were presented and discussed. A community panel shared their experiences and insights related to trial participation and community engagement. To formulate concrete recommendations for addressing specific BSS issues in upcoming HIV vaccine clinical research, participants divided into groups to discuss the following topics: social impact, risk assessment, community engagement, informed consent, risk reduction, and special populations. | CDC | HIV/AIDS. | NIAID/NIMH/OD | Health Care Reform: Behavioral Science and Health Research Economics. | 2008 | 51,000 | 0 |
| Behavioral Aspects of Pre-Exposure Prophylaxis (PrEP) Counseling for Intermittent Exposure | Research Initiative | The purpose of this agreement is to delineate and authorize implementation of collaboration for an HIV/AIDS prevention research program between the CDC's National Center for HIV/AIDS, Viral Hepatitis, Sexually Transmitted Diseases, and Tuberculosis Prevention, and NIMH. | Bench-to-Bedside (B2B) Program | Research Initiative | An intramural Bench-to-Bedside Program was established in 1999 to integrate the work of basic and clinical scientists on the NIH campus and to foster collaborations across institutes. Since the program's beginning, more than 500 principal and associate investigators have collaborated on 176 funded projects. The Clinical Center has coordinated the program for the past 12 years. Funding for the program is provided by ICs, the Food & Drug Administration, the NIH Office of Behavioral and Social Sciences Research, the Office of AIDS Research, the Office of Rare Diseases Research, the Office of Research on Women's Health, the National Center on Minority Health and Health Disparities, the National Center for Research Resources and represents a total investment of approximately $40M. The program expanded in 2006 to encourage partnerships between intramural and extramural investigators. | FDA | Accelerate Discovery to Improve Patient Care: Innovative Biomedical Methodologies, Innovative Biomedical Technologies, Patient-centered Research, and Translate basic science into new therapies. | Computational Toxicology for NIH Medications Discovery | Research Initiative | Through an Inter-Agency Agreement, the FDA provides structure-activity relationship-based toxicity predictions for compounds that are under evaluation in the NIDA Addiction Treatment Discovery Program. On a limited basis, other NIH ICs may utilize this resource by working through NIDA. | FDA | Accelerate Discovery to Improve Patient Care: Translate basic science into new therapies. | **NIDA** | Translational Research. | 2002 | 100,000 | 100,000 |
| Conducting Comprehensive Toxicological Assessments | Research Initiative | The purpose of this Agreement is to conduct, at FDA/NCTR, comprehensive toxicological assessments on FDA priority chemicals/agents nominated to the National Toxicology Program. Studies can include range finding sub-chronic and chronic, compound-specific mechanistic studies, and consideration of the use of alternate test systems. This combination of studies is designed to facilitate the interpretation of study results in support of comprehensive quantitative human health risk assessments. The primary goal of this program is to develop a comprehensive scientific data base that can be utilized to reduce the uncertainty in risk assessment/risk benefit analysis for specific chemicals with high FDA impact. | FDA | NONE | **NIEHS** | NONE | Unknown | 13,700,000 | 14,700,000 |
| Conference on Newborn Screening and Developmental Disorders in the Middle East and North Africa | Meeting/Workshop | NLM assisted in the organization of a conference on newborn screening and developmental disorders in the Middle East and North Africa that was held in Qatar in April 2010. The goal of the meeting was to establish or strengthen newborn and early childhood screening in the region with the goal of establishing international collaborations on rare conditions. One of the important issues discussed was the development of regional registries and databases that are interoperable. | CDC/HRSA | Accelerate Discovery to Improve Patient Care: Disseminate health information to the public. | CONNECT EHR Interoperability Special Interest Group (EHRI SIG) | Committee/Workgroup | CONNECT continues to expand and grow in line with the CONNECT Community's needs and in conjunction with the developments of the Nationwide Health Information Network. To support building out secure and easy-to-implement health information exchange among physicians, patients (personal health record), labs and pharmacies, the CONNECT program created the Electronic Health Record Interoperability Special Interest Group (EHRI SIG). The EHRI SIG was formed to ensure the interoperability requirements for EHR and related solutions are successfully incorporated into CONNECT as it continues to evolve to focus on the end-user experience. Members of the EHRI SIG will work together to achieve interoperability of EHR systems in line with Nationwide Health Information Network standards and specifications using the CONNECT solution. The Director of the NLM Lister Hill National Center for Biomedical Communications serves on the EHRI SIG. | OS | Accelerate Discovery to Improve Patient Care: Disseminate health information to the public, Fast-track innovation planning and regulatory review, and Innovative Biomedical Technologies. | **NLM** | Health Care Reform: Health Information Technology. | 2010 | N/A | 0 |
| Consensus Development Conference: Inhaled Nitric Oxide Therapy for Premature Infants | Meeting/Workshop | The final product of an NIH Consensus Conference is a written statement on a controversial medical topic prepared by an independent panel of health professionals free from conflicts of interest on the basis of the results of a systematic literature review, presentations by experts in the field, and public comments and questions. Inhaled nitric oxide therapy was approved by the U.S. Food and Drug Administration in 2000 to treat term and near-term infants with respiratory failure. Since its approval, researchers have examined expanding the use of inhaled nitric oxide therapy to treat premature babies born at less than 34 weeks gestation. Studies to evaluate its safety and efficacy for these infants have had mixed results in terms of key outcomes. The goal of this conference is to clarify the role of inhaled nitric oxide in this population. This meeting has not yet occurred. | AHRQ/CDC | Accelerate Discovery to Improve Patient Care: Disseminate health information to the public. Early Childhood Health Development. | Consensus Development Conference: Lactose Intolerance and Health | Meeting/Workshop | The final product of an NIH Consensus Conference is a written statement on a controversial medical topic prepared by an independent panel of health professionals free from conflicts of interest on the basis of the results of a systematic literature review, presentations by experts in the field, and public comments and questions. The goals of this conference were to examine the prevalence of lactose intolerance, the health outcomes of diets that exclude dairy products, the amount of dietary lactose tolerable in individuals with intolerance, and to identify effective strategies for managing lactose intolerance. The panel concluded that the true prevalence is not known. Many individuals who think they are lactose intolerant are not. Many individuals with real or perceived lactose intolerance avoid dairy and ingest inadequate amounts of calcium and vitamin D. In most cases, individuals do not need to eliminate dairy consumption completely. | AHRQ/CDC | Accelerate Discovery to Improve Patient Care: Disseminate health information to the public. Nutrition/Obesity. | NIA/NICHD/ NIDDK/**OD** | NONE | 2008 | 350,000 | 170,000 |
| Consensus Development Conference: Vaginal Birth After Cesarean: New Insights | Meeting/Workshop | The final product of an NIH Consensus Conference is a written statement on a controversial medical topic prepared by an independent panel of health professionals free from conflicts of interest on the basis of the results of a systematic literature review, presentations by experts in the field, and public comments and questions. A number of factors have contributed to a decline in the VBAC rate since the mid-1990s. The conference was convened to provide a thorough evaluation of the relevant research, to help pregnant women and providers make decisions about mode of delivery after a previous cesarean delivery. The panel concluded that trial of labor is a reasonable option for many pregnant women with one prior low transverse uterine incision. Trial of labor and elective repeat cesarean have important risks and benefits that differ for the woman and her fetus. A shared decision-making process should be adopted and, whenever possible, the woman's preference should be honored. | AHRQ/CDC | Accelerate Discovery to Improve Patient Care: Disseminate health information to the public. | Dynamics of Health, Aging, and Body Composition (Health ABC) | Research Initiative | Major objectives relate to observations that change in body composition in old age, particularly the increase in body fat and the decline in lean mass and bone mineral, represent a common pathway by which multiple diseases contribute to disability. There are many unanswered questions regarding the patterns and health impact of changes in weight and body composition in old age. Weight generally increases over the lifetime until late middle age, then tends to decrease into old age with changes in muscle, fat and bone. It has been postulated that the accelerated loss of muscle and strength in old age contributes to the onset of disability. Studies of weight and its relationship to mortality in older persons have yielded contradictory findings, leading to controversy regarding public health recommendations for weight in old age. Few studies have examined weight-related morbidity in old age, especially among African-Americans. | CDC | Accelerate Discovery to Improve Patient Care: Disseminate health information to the public. | NCCAM/**NIA**/NIDDK | Health Care Reform: Health Information Technology. | 1997 | 829,639 | 0 |
| Early Detection of Neuromuscular Diseases Workshop | Meeting/Workshop | This is a workshop on the Early Detection of Neuromuscular Diseases. The neuromuscular workshop will achieve the following goals: Assess the status of neuromuscular diseases in terms of their readiness for early detection and screening; share the qualifying parameters to be considered for early detection and screening, and determine the needs of the neuromuscular disease communities and what opportunities (fiscal and intellectual) are required to support their quest to have these conditions be screened. | CDC | NONE | **NICHD** | Translational Research. | 2009 | 15,000 | 0 |

| Guidelines for Prevention and Treatment of HIV Related Opportunistic Infections in Adults and Adolescents | OTHER: Professional education to inform health care providers and patients about optimal standard of care | In 1987, CCMD recognized the need for national guidelines on HIV management. The initial guideline focused on prevention and treatment of pneumocystis pneumonia. This was followed by guidelines on mycobacterium avium and then on all opportunistic infections. In 1995 both CDC and the Infectious Diseases Society of America were brought in as partners. Since then these guidelines have been revised many times, widely disseminated in print and on the web, and are the global standard for care. These have been funded by OAR. | CDC/FDA/HRSA | Accelerate Discovery to Improve Patient Care: Disseminate health information to the public. | HPTN 052 A Randomized Trial to Evaluate the Effectiveness of Antiretroviral Therapy Plus HIV Primary Care versus HIV Primary Care Alone to Prevent the Sexual Transmission of HIV-1 in Serodiscordant Couples | Research Initiative | These Clinical studies are based on data collected in Africa and Thailand. There is a correlation between HIV viral load (blood levels) and HIV transmission. Specifically, the higher the viral load in the blood, the more likely the chance for transmission. Antiretroviral therapy (ART) reduces the viral load in the blood, as well as in genital secretions (for both men and women), and the drugs can be detected in semen and vaginal and cervical secretions. All of this information strongly suggests that ART may make HIV-infected people less contagious. HPTN 052 compares the HIV-infection rates of two groups of HIV-serodiscordant couples. | CDC | Global Health: Infectious Diseases. | Institute of Medicine (IOM) Youth Concussions Project | Committee/Workgroup | This project began from interest among members of the Institute of Medicine (IOM)/National Research Council (MRC) Board on Children, Youth, and Families (BCYF) in developing a new activity focused on the topic of sports concussions in youth. A series of conference calls were held in early March 2010 focused on the health and educational issues associated with concussions/mild brain trauma among school-ages populations. The IOM first wanted to explore the need for a workshop or study that could identify key research findings, examine current policies and programs, and offer informed guidance for clinical practices, sports management, and educational settings. Congressional staff have also expressed interest in encouraging IOM to conduct a research review in this area, comparable to the 2002 IOM workshop on the consequences of head impact in youth soccer. To date: 1) IOM has secured funds for "planning meeting" towards a workshop; 2) IOM invites NICHD to attend a planning for the planning meeting on October 1, 2010; and 3) IOM in interested is securing funds for workshop. | CDC | Early Childhood Health/Development. | Interagency Subcommittee on Education (ISED) of the Interagency Committee on Disability Research (ICDR) | Committee/Workgroup | The Interagency Committee on Disability Research (ICDR) facilitates the effective exchange of information on disability and rehabilitation research activities among its member agencies. We coordinate activities that span the areas of assistive technology and universal design; medical rehabilitation; data and statistics; employment; and community participation. The Interagency Subcommittee on Education (ISED), a subcommittee of ICDR, focuses on issues related to the education of persons with disabilities by collecting input from stakeholders to inform planning; identifying emerging research areas; assessing gaps and duplications in existing research; and making recommendations to strengthen the federal research agenda. | ACF/AHRQ/CDC/ HRSA | Early Childhood Health/Development. Social/Behavior Research. | **NICHD** | Health Care Reform: Behavioral Science and Health Disparities. | Unknown | 0 | 0 |
| Interagency Subcommittee on Medical Rehabilitation (ISMR) | Committee/Workgroup | The Interagency Subcommittee on Medical Rehabilitation (ISMR) is composed of representatives from federal agencies involved in disability and related research including rehabilitation research. After receiving input from targeted individuals, the Committee shall identify, assess, and seek to coordinate all Federal programs, activities, and projects, and plans for such programs, activities, and projects with respect to the conduct of research (including assistive technology research and research that incorporates the principles of universal design) related to rehabilitation of individuals with disabilities. | AoA/AHRQ/CDC | Accelerate Discovery to Improve Patient Care: Innovative Biomedical Methodologies, Innovative Biomedical Technologies, Patient-centered Research, and Translate basic science into new therapies. | Mapping of the SNOMED CT and ICD Clinical Terminology | OTHER: Content Services | The U.S. Department of Health and Human Services (HHS) has set a goal for the nationwide implementation of an interoperable health information technology infrastructure to improve the quality and efficiency of health care. Achieving this goal will require that key clinical data elements are captured or recorded in detailed, standardized form (using standard vocabularies, codes, and formats) as close to their original sources (patients, health care providers, laboratories, diagnostic devices, etc.) as possible. If these standardized clinical data can also be used to generate HIPAA-compliant billing transactions automatically, this will provide another incentive for adoption of clinical data standards. For automated generation of bills from clinical data to become a reality, robust mappings from standard clinical terminologies to the HIPAA code sets must be created. | CDC/OS | Global Health: Strategic Initiative. Health Care Quality/Patient Safety. | **NLM** | Health Care Reform: Health Information Technology. | 2004 | 0 | 0 |
| Medical Education Partnership Initiative (MEPI) | Training Initiative | The Medical Education Partnership Initiative (MEPI) invites proposals from foreign institutions in Sub-Saharan African countries that receive President's Emergency Plan for AIDS Relief (PEPFAR) support and their partners to develop or expand and enhance models of medical education in Sub-Saharan Africa. These models are intended to support PEPFAR's goal of increasing the number of new health care workers by 140,000, strengthen medical education systems in the countries in which they exist, and build clinical and research capacity in Africa as part of a retention strategy for faculty of medical schools and clinical professors. | CDC/HRSA | Early Childhood Health/Global Health: Development. | NIH State-of-the-Science Conference: Diagnosis and Management of Ductal Carcinoma In Situ (DCIS) | Meeting/Workshop | NIH State-of-the-Science Conference provides a written statement on a controversial medical topic prepared by an independent panel of health professionals free from conflicts of interest on the basis of the results of a systematic literature review, presentations by experts in the field, and public comments and questions. With the increasing prevalence of DCIS of the breast and our current inability to determine those women with DCIS at high risk for invasive breast cancer, the purpose of the conference was to critically evaluate the available data on diagnosis and management. The panel concluded that much remains unknown in this area, but strong consideration should be given to remove the anxiety-producing term "carcinoma" from the description of DCIS. The primary question for future research should focus on the accurate identification of patient subsets diagnosed with DCIS who may be managed with less intervention. | AHRQ/CDC/FDA | Accelerate Discovery to Improve Patient Care: Disseminate health information to the public. Health Care Quality/Patient Safety. | NCI/**OD** | Health Care Reform: Comparative Effectiveness Research and Health Disparities. | 2007 | 185,000 | 0 |

| NIH State-of-the-Science Conference: Family History and Improving Health | Meeting/Workshop | NIH State-of-the-Science Conference provides a written statement on a controversial medical topic prepared by an independent panel of health professionals free from conflicts of interest on the basis of the results of a systematic literature review, presentations by experts in the field, and public comments and questions. Given the unprecedented proliferation of genomic information and the possibility of health care reform, this conference was convened to clarify the role of the family history, its validity in the primary care setting, and its effect on individual and population health outcomes. The panel recognized that family history has an important role in the practice of medicine and may motivate positive lifestyle changes, enhance individual empowerment, and influence clinical interventions. The panel found that it is currently unclear how this information can be effectively gathered and used in the primary care setting for common diseases. | AHRQ/CDC/ HRSA/OSG | Accelerate Discovery to Improve Patient Care: Disseminate health information to the public. Health Care Quality/Patient Safety. | NCI/NHLBI/ NHGRI/NIAAA/ NICHD/NIDA/ NIMH/NINR/**OD** | NONE | 2007 | 170,000 | 0 |
| NIH State-of-the-Science Conference: Preventing Alzheimer's Disease and Cognitive Decline | Meeting/Workshop | NIH State-of-the-Science Conference provides a written statement on a controversial medical topic prepared by an independent panel of health professionals free from conflicts of interest on the basis of the results of a systematic literature review, presentations by experts in the field, and public comments and questions. The goals of this conference were to examine the factors associated with an increased or decreased risk of Alzheimer's or cognitive decline and the risks and benefits of proposed interventions to improve or maintain cognitive function. The panel concluded that firm conclusions currently cannot be drawn about the association of any modifiable risk factor with cognitive decline or Alzheimer's. Evidence is insufficient to support the use of pharmaceutical agents or dietary supplements. A large amount of promising research is under way; these efforts should be increased. | AHRQ/CDC/CMS | Accelerate Discovery to Improve Patient Care: Disseminate health information to the public. | Nutritional Biochemistry in the Age-Related Eye Disease Study 2 (AREDS2) | Research Initiative | AREDS2 is a multi-center randomized trial designed to assess the effects of oral supplementation of high doses of macular xanthophylls (lutein and zeaxanthin) and/or omega -3 LCPUFAs (DHA and EPA) for the treatment of AMD and cataract. The primary objective of AREDS2 is to evaluate the effect of dietary xanthophylls (lutein/zeaxanthin) and/or omega-3 LCPUFAs (DHA and EPA) on progression to advanced AMD. This objective will be accomplished by collecting and assessing the data on approximately 4,000 AREDS2 participants aged 50 to 85 years, who at the time of enrollment have either: 1) bilateral large drusen, which are yellow deposits under the retina, or 2) large drusen in one eye and advanced AMD (neovascular AMD or central geographic atrophy) in the fellow eye. | CDC | Accelerate Discovery to Improve Patient Care: Translate basic science into new therapies. | Personal Motion Technologies for Healthy Independent Living | Meeting/Workshop | Support the development and translation of high-impact home-based technology systems for health. This includes viable integrated systems using standards and common platforms for diagnosis, monitoring, screening, and intervention as well as studies to prove the effectiveness/efficacy of personal health technologies for people with disabilities, aging adults, and people with chronic disease. | CMS/FDA | Accelerate Discovery to Improve Patient Care: Innovative Biomedical Technologies, Innovative Biomedical Technologies and Patient-centered Research. Health Care Quality/Patient Safety. | NCRR/NIA/NIBIB/ **NICHD**/NINDS/OD | Health Care Reform: Comparative Effectiveness Research, Health Information Technology, and Patient Safety. | 2010 | N/A | 5,000 |
| Phenylketonuria (PKU) | Meeting/Workshop | A two-day scientific conference on PKU and other forms of hyperphenylalaninemia is planned to take place within the next 12-18 months. NIH last published screening and management guidelines for PKU as the result of a Consensus Conference held in October 2000. Developments since that time regarding PKU and treatment strategies have made it time to revisit those guidelines. NIH established five Working Groups to generate and address specific questions related to: 1) Diet Control and Management; 2) Pharmacologic Interventions; 3) PKU and Pregnancy; 4) Long-Term Cognitive Outcomes and Follow-up; and 5) Molecular Testing, New Technologies, and Epidemiologic Considerations. | AHRQ/CDC/FDA/ HRSA | Accelerate Discovery to Improve Patient Care: Disseminate health information to the public. | Photography and Image Processing of Prescription Solid Dosage Form Medications and Hosting of a Database of Substances in Medicinal Products | Database | This project aims to create and expand a database interface to provide public access to FDA unique ingredient identifiers (UNIIs) in medicinal products and substances. The interface allows exchange between government and industry for phases of clinical developments. As part of the project, NLM will assist in conducting a comprehensive scientific literature review, developing a compilation of results in a searchable table format and preparing a written summary and interpretation of results. | FDA | Accelerate Discovery to Improve Patient Care: Disseminate health information to the public and Innovative Biomedical Technologies. | **NLM** | Health Care Reform: Health Information Technology. | 2009 | 0 | 0 |
| Pillbox - creation of digital images of solid dosage form medications | Database | Pillbox is a collaboration between NLM and FDA to enhance patient safety through the linking of digital images of prescription solid dosage form medications to the Structured Product Labeling (SPL) files and the substance information of those pharmaceuticals. NLM will use these images to create a resource for identification of pharmaceuticals through a search system. Work is ongoing to create digital images and develop imaging standards. | FDA | Accelerate Discovery to Improve Patient Care: Disseminate health information to the public. Health Care Quality/Patient Safety. | **NLM** | Health Care Reform: Patient Safety. | 2009 | 0 | 0 |

| Table 1: FY 2009 and FY 2010 Collaborations | | | | | NIH Funding for FY 2009 = $304,987,418 and FY 2010 = $399,479,301 | | | | |

| President's Emergency Plan for AIDS Relief (PEPFAR) Implementation Science and Public Health Evaluation Activities | Research Initiative | PEFPAR is governed by intra-agency groups, including NIH, CDC, and HRSA for HHS. CDC has a large role as an implementing partner for PEPFAR, while NIH has limited their activities to providing technical expertise on issues related to safety and efficacy of elements for PEPFAR programs, and to facilitating evaluation of PEPFAR through NIH funded investigators. The Agencies work together to set research and evaluation priorities for PEPFAR. In previous years, this was done through the PHE process, and in FY10 a specific funding announcement was made with supplement awards through NIH Institutes and Centers. NIH takes an active role in reviewing and making recommendations for the PHE process, CDC and HRSA were actively involved in the review process for the NIH supplement applications. | CDC/HRSA/ SAMHSA | Accelerate Discovery to Improve Patient Care: Fast-track innovation planning and regulatory review and Patient-centered Research. | Strategic Multisite Initiative for the Identification, Linkage and Engagement in Care of Youth with Undiagnosed HIV Infection (SMILE in CARING for YOUTH) | Research Initiative | The Adolescent Medicine Trials Network for HIV/AIDS Interventions (ATN) was awarded grant money to expand their project of increasing availability of HIV testing for adolescents 12-24 and the provision of adolescent-focused healthcare services for those adolescents who are diagnosed with HIV infection. The project's expansion includes all the ATN sites across the US and Puerto Rico. NICHD is collecting data to evaluate the effectiveness of adolescent oriented linkage to care services for the HIV infected adolescents. This collaboration has the potential to improve the health of American youth, both by identifying those with undiagnosed HIV and bringing them into adolescent-friendly treatment programs and by reducing the chances of them further spreading the virus to others. | CDC | Accelerate Discovery to Improve Patient Care: Disseminate health information to the public. | Ten years post PKU Consensus Conference: State of the Science | Committee/Workgroup | The purpose of this collaboration is to have a scientific discussion to address management of phenylketonuria (PKU) in light of recent research findings. Screening and management guidelines for PKU were last published as the result of a Consensus Conference held in October 2000, and there have been new developments since that time. This new discussion will consider the state of the science in the areas of diet control and management; pharmacologic interventions; PKU and pregnancy; long-term cognitive outcomes and follow-up; and molecular testing, new technologies, and epidemiologic considerations. We are convening working groups to generate and address specific questions related to these topics. In parallel, an AHRQ Evidence-based Practice Committee is independently evaluating the use of newly available pharmaceutical interventions relative to dietary interventions for PKU, with the NIH as a partner in this process. We plan to host a conference in late 2011 (or early 2012) after the AHRQ review process, to discuss the conclusions and recommendations of the working groups. | AHRQ/CDC/FDA/ HRSA | Accelerate Discovery to Improve Patient Care: Disseminate health information to the public, Innovative Biomedical Methodologies, Innovative Biomedical Technologies, Patient-centered Research, and Translate basic science into new therapies. | The HHS Influenza Fact Sheet | Committee/Workgroup | In an effort to "get out the word" about the availability of HHS influenza technologies, an informational document was developed detailing HHS technology transfer practices and polices, particularly as they pertain to influenza vaccine and diagnostic technologies. This document was prepared at the request of the HHS Office of the Secretary, Office of Global Health Affairs and is available online in English, Spanish, Chinese, and Vietnamese. The document summarizes the HHS position regarding seeking patent protection and granting of licenses to these patent portfolios as well as unique biological materials. It specifically highlights that HHS activities involving influenza intellectual property and biological materials have been consistent with these policies and provides information on the technologies available for commercial development by a suitable license applicant. The document encourages organizations from any country to apply for a license for the various influenza technologies and highlights certain features of the license agreements meant to encourage broad dissemination of products, such as no royalties on products donated or sold at cost to public institutions for use in developing countries. | CDC | Global Health: Infectious Diseases. | NIAID/**OD** | NONE | 2009 | 0 | 0 |
| The Maternal-Fetal Medicine Units Network | Committee/Workgroup | Since 1986, the Maternal-Fetal Medicine Units Network conducts clinical studies to improve maternal, fetal and neonatal health emphasizing randomized-controlled trials. The aims of the Network are to reduce maternal, fetal, and infant morbidity related to preterm birth, fetal growth abnormalities, and maternal complications, as well as providing the rationale for evidence-based, cost-effective, obstetric practice. | AHRQ | Health Care Quality/Patient Safety. | **NICHD**/OD | NONE | 2007 | 0 | 0 |

| Tox21 Collaboration | Research Initiative | The Toxicology in the 21st Century project, or Tox21, is a collaborative effort that began in 2006 with the NIH Chemical Genomics Center (NCGC), the National Toxicology Program (NTP) based at the National Institute of Environmental Health Sciences (NIEHS), and the Environmental Protection Agency. The ambitious initiative was designed to predict the toxicity of chemicals on human health and the environment. This is accomplished by developing in vitro assays for more predictive, mechanistically-based methods than those used with current animal testing. On July 19th, 2010, the U.S. Food and Drug Administration (FDA) joined this ground-breaking collaboration. The FDA will bring human toxicity data into the project, along with other expertise, to improve upon current chemical testing methods. | FDA | Accelerate Discovery to Improve Patient Care: Innovative Biomedical Methodologies, Innovative Biomedical Technologies, and Translate basic science into new therapies. | **NHGRI**/NIEHS | High-throughput Technology. | Workshop on New Research Directions for Chronic Disease Prevention in the Workplace | Meeting/Workshop | The objective of this workshop was to provide recommendations for a comprehensive and coordinated research plan to prevent chronic diseases in adults through worksite interventions. The workshop used a conceptual framework drawn from an integrative approach to chronic disease prevention at worksites. The workshop included three panel discussion sessions: 1) promoting individual behavior change; 2) changing the work environment (physical, psycho-social and organizational); and 3) addressing workplace interventions within the context of family and community health. Based on the presentations from the three panels, the workshop participants outlined a framework for a research agenda to integrate health promotion and health protection approaches. | CDC | NONE | **NHLBI** | NONE | 2009 | 35,000 | 0 |
