

Bisexual Health Research Workshop: Life Course Perspectives

Elizabeth Saewyc, PhD, RN, FSAHM, FCAHS, FAAN
Stigma & Resilience Among Vulnerable Youth Centre
University of British Columbia School of Nursing
Vancouver, Canada

My fellow panelists and our life course research overlaps:

- **Dr. Elizabeth Saewyc:** adolescents (ages 12-19), sometimes young adults, plus pregnant/parenting teens as life course event
- **Dr. Brian Feinstein:** Adolescent males (14-17) and longitudinal work with adults
- **Dr. Lori Ross:** Adults, including bisexual parenting experiences
- **Dr. Karen Fredriksen:** Seniors (sometimes mid-life adults)

Increasing Numbers of Bi+ People

YRBS, 2005-2015 (N = 344,815)

Phillips et al. (2019)

Questions to Discuss

- Changing landscape of labels/terms—implications for sampling/research?
- Longitudinal studies of fluidity and relationship patterns?
- Research in intersectionality, around class, race/ethnicity, ability, gender?
- Do major life events look different for Bi+ folks than other orientations/ or prior generations?

What labels do bisexual people use?

Bauer, Ross et al. (manuscript in preparation)
